ORGANIZATION

2017	Badan Perwakilan Mahasiswa FE UNJ Student Legislative Council Staff
2019	Badan Perwakilan Mahasiswa FE UNJ Student Legislative Council Chairman

PROFESSIONAL PROJECT EXPERIENCE

The more I know, the more I realize that I don't know. I am grateful to all the people who have given me the chance as a beginner to be involved in big, complex, and challenging projects. The projects listed below are the ones I have successfully worked on professionally during my career so far.

SATELIT REPUBLIK INDONESIA (SATRIA) - 1
PT PASIFIK SATELIT NUSANTARA

Satelit Republik Indonesia is a National Strategic Project approved by the President of the Republic of Indonesia. This project, valued at Rp 8 Trillion, was launched June 2023, by SpaceX in Florida, USA. SATRIA-1 is the largest capacity satellite in Asia and the 5th largest in the world. The VHTS technology on this satellite is also the first in Indonesia. This satellite is a collaboration between Kominfo and PSN. My team and I worked on creating software to process the information transmitted by the satellite. It has been a highly challenging and complex endeavor for me, but I am grateful to the leaders and team members who trusted me to collaborate with them and make a contribution to Indonesia.

SATELIT NUSANTARA LIMA
PT PASIFIK SATELIT NUSANTARA

Satelit Nusantara Lima is Indonesia's first private satellite with VHTS (Very High Throughput Satellite) technology, owned and operated by Pasifik Satelit Nusantara. My team and I developed software using microservices architecture to process the satellite's data. Like SATRIA-1, it was launched by SpaceX in Florida, USA. It is specifically designed and operated to fulfill the business requirements of the company, serving both B2C and B2B purposes. I would like to express my gratitude to the team and leaders for entrusting me with this complex and challenging project.

CLOUD PSN
PT PASIFIK SATELIT NUSANTARA

Cloud PSN was my first project with full responsibility (under the supervision of the Manager) for designing, maintaining, and adding modules to the Frontend. This project was a business expansion for our company, and I was fortunate to be one of the individuals entrusted with working on this project from ideation to profitability. We started the project from scratch to establish a cloud-based VPS business. I am grateful to the team for their trust in me, and I extend my appreciation to the Manager for delegating this responsibility to me.

FULLSTACK WEB ENGINEER RESPONSIBILITY
PT CHEILJEDANG FEED AND CARE

This was my first career as a full-stack web engineer. During this time, I developed a custom ERP application for the company using Laravel and CodeIgniter. We utilized Oracle as the database and worked on a Windows Server environment. I had full responsibility for various aspects of web development, including server management, CI/CD, web design, and IT security. Being part of this team was a fortunate opportunity for me, as I gained valuable knowledge beyond programming, such as server administration, enterprise networking, and DBMS.
